WORKSHEET, COST AND EFFORT

IBM BAW Migration Cost and Effort Estimator

A worksheet to size both sides: what you pay to stay, and what it costs to rebuild elsewhere.

A planning worksheet, reviewed August 2026, figures are reported ranges

01 Reported BAW licensing ranges

Deployment size	Reported monthly range
Small (1 user)	Roughly \$500
Mid-size (10 users)	Roughly \$4,000
Enterprise (100 users)	\$30,000 or more

BAW does not publish list pricing; these are reported figures from independent comparison sites. Implementation, customisation and training are separate, additional costs. Price your own real deployment before deciding.

02 Rebuild effort model

Process band	Characteristics	Hours per process
Simple	Linear approval, few conditions.	8 to 20
Medium	Branching logic, one or two integrations.	25 to 60
Complex	Parallel branches, SLAs, complex data models.	70 to 180+

03 Your worksheet

Band	Count	Hours each	Subtotal
Simple			
Medium			
Complex			
Total rebuild effort			
+ 3-year licensing at target platform
