VERSION STATUS

Your IBM BAW Version Exposure Report

Which version you run, what its support window is, and recommended next steps. Not a platform shutdown.

Compiled from IBM's own lifecycle documentation, reviewed August 2026

01 The short version

- IBM continues to develop BAW; there is no platform-wide shutdown.
- BAW 23.0.x reaches end of support on April 30, 2026, and can no longer be purchased after that date.
- BAW 24.0.x carries a 3-year base support period from release.
- If IBM ever withdraws the offering entirely, its policy is at least 12 months' notice.

02 Recommended next steps

1. Confirm which BAW version your estate actually runs.
2. If on 23.0.x, plan an upgrade or migration ahead of April 30, 2026.
3. Inventory processes and triage before scoping any rebuild.
4. Weigh staying current on BAW against migrating, using real licensing figures for your deployment.

SOURCES AND VERIFICATION

- IBM: Business Automation Workflow 23.0.x and 24.0.x product lifecycle pages
- IBM: BAW and Integration Designer software support lifecycle addendum
